## 1.0 Overview

This document provides the details of an OVP Fast Processor Model variant.

OVP Fast Processor Models are written in C and provide a C API for use in C based platforms. The models also provide a native interface for use in SystemC TLM2 platforms. The models are written using the OVP VMI API that provides a Virtual Machine Interface that defines the behavior of the processor. The VMI API makes a clear line between model and simulator allowing very good optimization and world class high speed performance. Most models are provided as a binary shared object and also as source. This allows the download and use of the model binary or the use of the source to explore and modify the model.

The models are run through an extensive QA and regression testing process and most model families are validated using technology provided by the processor IP owners.

There is a companion document (OVP Guide to Using Processor Models) which explains the general concepts of OVP Fast Processor Models and their use. It is downloadable from the OVPworld website documentation pages.

### 1.1 Description

MIPS64 Configurable Processor Model

### 1.2 Licensing

Usage of binary model under license governing simulator usage. Source of model available under Imperas Software License Agreement.

### 1.3 Limitations

Cache model not implemented on mips64 variants

If this model is not part of your installation, then it is available for download from [www.OVPworld.org/MIPUser](http://www.OVPworld.org/MIPUser).

### 1.4 Verification

Models have been validated correct as part of the MIPS Verified program and run through the MIPS AVP test programs

### 1.5 Features

MIPS64 Instruction set implemented

MMU Type: Standard TLB

Vectored interrupts implemented

## 2.0 Configuration

### 2.1 Location

The model source and object file is found in the VLNV tree at:  
[mips.ovpworld.org/processor/mips64/1.0](http://mips.ovpworld.org/processor/mips64/1.0)

### 2.2 GDB Path

The default GDB for this model is found at:  
\$IMPERAS\_HOME/lib/\$IMPERAS\_ARCH/gdb/mips-sde-elf-gdb

### 2.3 Semi-Host Library

The default semi-host library file is found in the VLNV tree at :  
[mips.ovpworld.org/semihosting/mips64Newlib/1.0](http://mips.ovpworld.org/semihosting/mips64Newlib/1.0)

## 2.4 Processor Endian-ness

This model can be set to either endian-ness (normally by a pin, or the ELF code).

## 2.5 QuantumLeap Support

This processor is qualified to run in a QuantumLeap enabled simulator.

## 2.6 Processor ELF Code

The ELF code supported by this model is: 0x8

# 3.0 Other Variants in this Model

Table 1.

| Variant |
|---------|
| 5Kf     |
| 5Kc     |
| 5KEf    |
| 5KEc    |

# 4.0 Bus Ports

Table 2.

| Type               | Name        | Bits |
|--------------------|-------------|------|
| master (initiator) | INSTRUCTION | 32   |
| master (initiator) | DATA        | 32   |

# 5.0 Net Ports

Table 3.

| Name   | Type  | Description                     |
|--------|-------|---------------------------------|
| reset  | input | Core reset                      |
| dint   | input | Debug external interrupt        |
| hwint0 | input | External interrupt              |
| hwint1 | input | External interrupt              |
| hwint2 | input | External interrupt              |
| hwint3 | input | External interrupt              |
| hwint4 | input | External interrupt              |
| hwint5 | input | External interrupt              |
| nmi    | input | Non-maskable external interrupt |

# 6.0 FIFO Ports

No FIFO Ports in this model.

# 7.0 Parameters

Table 4.

| Name                     | Type    | Description  |
|--------------------------|---------|--|
| mipsHexFile              | String  | Load a MIPS hex file (test-mode)   |
| IMPERAS_MIPS_AVP_OPCODES | Boolean | Enable MIPS-specific magic Pass/Fail opcodes (specific for AVP test termination)   |
| cacheIndexBypassTLB      | Boolean | When set, cache index ops do not generate TLB exceptions   |
| MIPS_TRACE               | Boolean | Enable MIPS-format trace output  |
| supervisorMode           | Boolean | Override whether processor implements supervisor mode  |
| busErrors                | Boolean | Override bus error exception behavior. When true, accesses of memory not defined by platform will cause bus error exceptions |
| fixedMMU                 | Boolean | Override the MMU type to fixed mapping when true (sets Config.MT=3, Config.KU/K23=2 and Config1.MMUSizeM1=0)                 |
| removeDSP                | Boolean | Override the DSP-present configuration when true (sets Config3.DSPP/DSP2P=0)   |
| removeCMP                | Boolean | Override the CMP-Present configuration when true (sets Config3.CMGCR and GCR_BASE to 0)                                      |
| removeFP                 | Boolean | Override the FP-Present configuration when true (sets Config1.FP to 0)   |
| isISA                    | Boolean | Enable to specify ISA model (reset address from ELF, all coprocessors enabled)   |
| hiddenTLBentries         | Boolean | Deprecated - Instead set config1MMUSizeM1 to maximum value to improve performance  |
| ITCNumEntries            | Uns32   | Specify number of ITC cells present (MT cores only)  |
| ITCNumFIFO               | Uns32   | Specify number of ITC FIFO cells in reference ITC implementation (MT cores only)   |
| MTFPU                    | Uns32   | Enable multi-threaded FPU (1:old mttc1 behavior, 2:new mttc1 behavior)   |
| supportDenormals         | Boolean | Enable to specify that the FPU supports denormal operands and results  |
| VPE0MaxTC                | Uns32   | Specifies the maximum TCs initially on VPE0  |
| segBits                  | Uns32   | Override the number of address bits implemented for 64 bit segments (MIPS64 Only)  |
| mpuRegions               | Uns32   | Number of regions for memory protection unit   |
| mvpcnf0vpe               | Uns32   | Override MVPConf0.PVPE   |
| mvpcnf0tc                | Uns32   | Override MVPConf0.PTC  |
| mvpcnf0pcp               | Boolean | Override MVPConf0.PCP  |
| mvpcnf0tcp               | Boolean | Override MVPConf0.TCP  |
| configDSP                | Boolean | Override Config.DSP (data scratchpad RAM present)  |

|                  |         |   |
|------------------|---------|---|
| configISP        | Boolean | Override Config.ISP (instruction scratchpad RAM present)        |
| configK0         | Uns32   | Override power on value of Config.K0 (set Kseg0 cacheability)   |
| configKU         | Uns32   | Override power on value of Config.KU (set Useg cacheability)    |
| configK23        | Uns32   | Override power on value of Config.K23 (set Kseg23 cacheability) |
| configMDU        | Boolean | Override Config.MDU (iterative multiply/divide unit)            |
| configMM         | Boolean | Override Config.MM (merging mode for write)                     |
| configMT         | Uns32   | Override Config.MT  |
| configSB         | Boolean | Override Config.SB (simple bus transfers only)                  |
| MIPS16eASE       | Boolean | Override Config1.CA (enables the MIPS16e ASE)                   |
| config1DA        | Uns32   | Override Config1.DA (Dcache associativity)                      |
| config1DL        | Uns32   | Override Config1.DL (Dcache line size)                          |
| config1DS        | Uns32   | Override Config1.DS (Dcache sets per way)                       |
| config1EP        | Boolean | Override Config1.EP (EJTag present)                             |
| config1IA        | Uns32   | Override Config1.IA (Icache associativity)                      |
| config1IL        | Uns32   | Override Config1.IL (Icache line size)                          |
| config1IS        | Uns32   | Override Config1.IS (Icache sets per way)                       |
| config1MMUSizeM1 | Uns32   | Override Config1.MMUSizeM1 (number of MMU entries-1)            |
| config1WR        | Boolean | Override Config1.WR (watchpoint registers present)              |
| config1FP        | Boolean | Override Config1.FP (FPU present)                               |
| config3BI        | Boolean | Override Config3.BI   |
| config3BP        | Boolean | Override Config3.BP   |
| config3CDMM      | Boolean | Override Config3.CDMM   |
| config3CTXTC     | Boolean | Override Config3.CTXTC  |
| config3DSPP      | Boolean | Override Config3.DSPP   |
| config3DSP2P     | Boolean | Override Config3.DSP2P  |
| config3IPLW      | Uns32   | Override Config3.IPLW   |
| config3ISA       | Uns32   | Override Config3.ISA  |
| config3ISAOnExc  | Boolean | Override Config3.ISAOnExc                                       |
| config3ITL       | Boolean | Override Config3.ITL  |
| config3LPA       | Boolean | Override Config3.LPA  |
| config3MCU       | Boolean | Override Config3.MCU  |
| config3MMAR      | Uns32   | Override Config3.MMAR   |
| config3RXI       | Boolean | Override Config3.RXI  |
| config3SC        | Boolean | Override Config3.SC   |
| config3ULRI      | Boolean | Override Config3.ULRI   |

|                    |         |   |
|--------------------|---------|---|
| externalinterrupt  | Boolean | Override Config3.VEIC (enables the use of an external interrupt controller)       |
| vectoredinterrupt  | Boolean | Override Config3.VInt (enables vectored interrupts)                               |
| config3VZ          | Boolean | Override Config3.VZ   |
| config4AE          | Boolean | Override Config4.AE   |
| config4IE          | Uns32   | Override Config4.IE   |
| config4MMUConfig   | Uns32   | Override Config4.MMUConfig field (interpretation depends on MMUExtDef value)      |
| config4MMUExtDef   | Uns32   | Override Config4.MMUExtDef  |
| config4VTLBSizeExt | Uns32   | Override Config4.VTLBSizeExt  |
| config5EVA         | Boolean | Override Config5.EVA  |
| config5NFExists    | Boolean | Override Config5.NFExists   |
| config5MSAEn       | Boolean | Override Config5.MSAEn  |
| config6FTLBEEn     | Boolean | Override power on value of Config6.FTLBEEn  |
| config7AR          | Boolean | Override Config7.AR (Alias removed Data cache)                                    |
| config7DCIDX_MODE  | Uns32   | Override Config7.DCIDX_MODE   |
| config7HCI         | Boolean | Override Config7.HCI (Hardware Cache Initialization)                              |
| config7IAR         | Boolean | Override Config7.IAR (Alias removed Instruction cache)                            |
| config7WII         | Boolean | Override Config7.WII (wait IE/IXMT ignore)  |
| fcsrABS2008        | Boolean | Override FCSR.ABS2008 (ABS/NEG compliant with IEEE 754-2008)                      |
| fcsrNAN2008        | Boolean | Override FCSR.NAN2008 (QNaN/SNaN encodings match IEEE 754-2008 recommendation)    |
| firPS              | Boolean | Override FIR.PS (PS floating point type implemented)                              |
| firHas2008         | Boolean | Override FIR.Has2008 (one or more IEEE 754-2008 features present)                 |
| intctlIPFDC        | Uns32   | Override IntCtl.IPFDC   |
| intctlIPTI         | Uns32   | Override IntCtl.IPTI  |
| pridRevision       | Uns32   | Override PRId.Revision  |
| srsctlHSS          | Uns32   | Override SRSCtl.HSS (number of shadow register sets)                              |
| ExceptionBase      | Uns32   | Specify the BEV Exception Base address. (use GCR_Cx_RESET_BASE on CMP processors) |
| UseExceptionBase   | Boolean | Set to one to use ExceptionBase[29:12] as the corresponding BEV address bits      |
| EIC_OPTION         | Uns32   | Override the external interrupt controller EIC_OPTION                             |

## 8.0 Execution Modes

Table 5.

| Name       | Code |
|------------|------|
| KERNEL     | 0    |
| DEBUG      | 1    |
| SUPERVISOR | 2    |
| USER       | 3    |

## 9.0 Exceptions

Table 6.

| Name     | Code |
|----------|------|
| Int      | 0    |
| Mod      | 1    |
| TLBL     | 2    |

## 10.0 Hierarchy of the model

A CPU core may allow the user to configure it to instance many processors of a Symmetrical Multi Processor (SMP). A CPU core may also have sub elements within a processor, for example hardware threading blocks.

OVP processor models can be written to include SMP blocks and to have many levels of hierarchy.

Some OVP CPU models may have a fixed hierarchy, and some may be configured by settings in a configuration register. Please see the register definitions of this model.

This model documentation shows the settings and hierarchy of the default settings for this model variant.

### 10.1 Level 1: CPU

This level in the model hierarchy has 16 commands.

This level in the model hierarchy has 4 register groups:

Table 7.

| Group name          | Registers |
|---------------------|-----------|
| Core                | 33        |
| DSP                 | 9         |
| COP0                | 32        |
| Integration_support | 1         |

This level in the model hierarchy has no children.

## 11.0 Model Commands

### 11.1 Level 1: CPU

Table 8.

| Name              | Arguments  |
|-------------------|--|
| isync             | specify instruction address range for synchronous execution                  |
| itrace            | enable or disable instruction tracing  |
| mipsCOP0          | <register> <select>  |
| mipsCacheDisable  |  |
| mipsCacheEnable   | -tag -full   |
| mipsCacheRatio    | -icache -dcache  |
| mipsCacheReport   |  |
| mipsCacheReset    |  |
| mipsCacheTrace    | -on -off [-nocached -nouncached] [-noicache -nodcache] [-noartifact -notrue] |
| mipsDebugFlags    | <value>  |
| mipsReadRegister  | <resource> <offset>  |
| mipsReadTLBEntry  | <index>  |
| mipsTLBDump       |  |
| mipsTLBGetPhys    | <virtual address> <ASID>   |
| mipsWriteRegister | <resource> <offset> <value>  |
| mipsWriteTLBEntry | <index> <lo0> <lo1> <hi0> <mask>   |

## 12.0 Registers

### 12.1 Level 1: CPU

#### 12.1.1 Core

Table 9.

| Name | Bits | Initial value (Hex) |    | Description   |
|------|------|---------------------|----|---------------|
| zero | 64   | 0                   | r- | constant zero |
| at   | 64   | 0                   | rw |               |
| v0   | 64   | 0                   | rw |               |
| v1   | 64   | 0                   | rw |               |
| a0   | 64   | 0                   | rw |               |
| a1   | 64   | 0                   | rw |               |
| a2   | 64   | 0                   | rw |               |
| a3   | 64   | 0                   | rw |               |
| t0   | 64   | 0                   | rw |               |
